

Removal of unused ECMWF and 3rd-party software modules

There are many modules of ECMWF and 3rd-party software deployed on all platforms at the centre that, according to our logs, haven't been loaded in 2018. As part of our annual cleanup cycle, in this first stage, we are going to remove the modules for those unused versions. The actual deployments and installations for those software packages are not going to be deleted at this point. This will be done at a later stage after the summer.

If you are using any of the versions affected by this change outside the module system, we strongly recommend moving to the default version for that particular package before the second stage to avoid any future problems

If you have any concerns, please get in touch with our servicedesk@ecmwf.int.

When?

The session is scheduled for **Wednesday 4 July 2018** at 10:00 UTC

What and where?
