

How do I embed an ecFlow manual page into a Metview Macro? - Metview FAQ

Step-by-step guide

This can be done using Macro's **inline string** capability, which allows arbitrary text to be inserted into the macro and stored in a string variable. Example:

```
# Metview Macro

dummy_string = string inline
%manual

ecflow manual
DESCRIPTION

#####
# Example ecFlow task
# This is the manual page for the task
#####

%end
end inline

print('Start of Macro execution...')
```
