WMS service interruptions due to ECMWF Web team sessions

The ECMWF Web team schedules sessions (service maintenance and update) on Wednesdays on a bi-weekly basis - this will affect access to the WMS service.

We recommend WMS users to check the [status of the ECMWF Computing Services](#) (upcoming planned sessions also listed).

Introduction

A Web Map Service (WMS) is available through a server at ECMWF (<http://eccharts.ecmwf.int>) to request dynamic maps over HTTP for a selection of CAMS Global and European air quality products.

GetCapabilities request

To get the selection of the available CAMS public layers please use the following syntax:

```
http://eccharts.ecmwf.int/wms/?token=public&request=GetCapabilities&version=1.3.0
```

Examples of requests

A sample request, to select of CAMS Global air quality layers, uses the following syntax:

```
http://eccharts.ecmwf.int/wms/?token=public&request=GetMap&layers=${layers},grid,foreground&styles=${styles}&width=${width}&bbox=-90,-180,90,180
```

Please check the table above for the right *layers*

If *styles* is not defined, the default one is used.

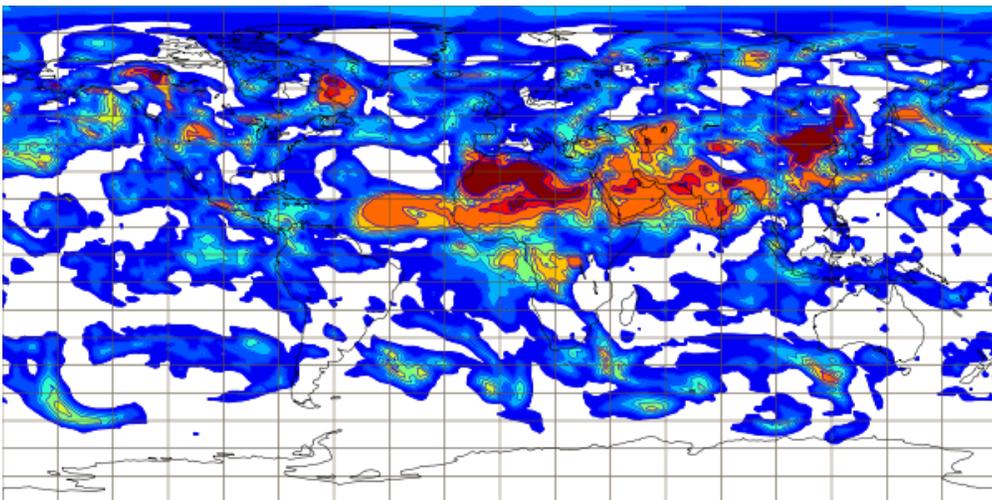

The *width* is defined as the number of pixel.

The convention for the geographical boundaries (*bbox*) is South, West, North, East.

Accessing CAMS European air quality WMS products

From 1st July 2020, the access method to the European air quality WMS is through the server at ECMWF which hosts CAMS Service. Please be aware that:

- based on usage statistics initially only hourly ensemble surface forecast fields are available
- to ease the migration, legacy layer names are encoded in a layer metadata of the GetCapabilities response as "legacy name: OLD_NAME" keyword.
- the default styles and the style names are the same as before the migration

The following table lists the available CAMS European air quality layers and the corresponding legacy layer names (last reviewed on 21-01-2021):
