

European Weather Cloud User Workshop 10-11 November 2021: Registration now open + Survey

We are pleased to announce a new edition of the the European Weather Cloud User Workshop, jointly organised by ECMWF and EUMETSAT every 6 months. The event will be completely virtual and will be held split over two afternoons (Note that timings may vary slightly as the programme is finalised):

- 10 November 2021 13:30-16:00 CET
- 11 November 2021 13:30-16:00 CET

This workshop is open to Member and Co-operating States of EUMETSAT and ECMWF. If you meet the attendance criteria and would like to participate, we would kindly ask you to complete the [registration form](#) before 3 November.

As we are reaching the final stages of the pilot phase of this project, this workshop will provide an opportunity to come together to see what has been achieved, but also to look ahead at what is coming as we gradually move to an operational service. We will combine presentations from ECMWF, EUMETSAT and Users, as well as interactive sessions for discussions, feedback and exchange of ideas. The full programme will be made available shortly.

We would like take this opportunity to ask you for a few minutes of your time ahead of the workshop to tell us what you think, and what your experience has been so far with the European Weather Cloud. Your feedback will help us shape the service as we move towards the operational phase of the European Weather Cloud in 2022:
