

Climatology

To facilitate the computation of verification statistics analyses-based and observation station-based climatologies have been made available.

Please note the datasets described here are solely intended for computation and exchange of verification scores under WMO CBS guidelines.

Upper-air analyses-based climatology

Daily climatology fields derived from ERA-Interim analyses, period 1989-2008.

- Climatology fields available at <ftp://wmolcdnv@aux.ecmwf.int/data/climatology/era-dailyclim/era-interim/> ([how to access the ftp server](#))

Precipitation climatology

To facilitate the computation of the SEEPS score for precipitation, station climatologies for 24-h precipitation based on the period 1980-2009 have been made available. The file SEEPSclim.tar.gz contains the climatologies, a description of the data format and quality control, and an example SEEPS program.
