

Changes in version 000394

Platform support

- This is the first version to supports ECMWF's new Cray XC30 system - Most changes relate to the Cray Fortran compiler 8.2 and include
 - Adopt use of Cray pointers
 - Enabling shared memory handling for coefficient files under Linux
 - Add better logging output
 - Force IEEE floating point arithmetic
- Makefiles were corrected to compile on Redhat 6.4

New default directories

- With version 000393, the default directories for the installations of libraries and (GRIB & BUFR) tables at ECMWF was changed to be in /usr/local/apps. At the time not all hard coded paths were changed. This should be fixed now.

Bugfixes

- Build stops now if compilation error occurs (EMOS-16)

License change

- This is the first version of Emoslib released under the Apache License 2.0. This license is more permissive than LGPL and allows the use in non Open Source software.
