

# Changes in version 000395

Released internally June 2014; Export release end of August 2014

## Platform support

- See [Changes in version 000394](#)
- Gfortran - adjust compiler options (to avoid -lquadmath for better performance)

## New features

- Code changes to generate N1024 LSM files for rotated grids (LSM\_GG\_1024)
- Added N=1280 grid definition and reduced the minimum LatLong increment [EMOS-65](#)

## Bugfixes

- Major correction of bilinear interpolation with reduced Gaussian grids (corrected interpolation weights) [EMOS-55](#)
  - Users are likely to see changes in the output
- Fixed debug information output with JDCNDBG flag (introduced in 000394)
- Added BUFR table path handling via LOCAL\_TABLE\_PATH in config
