# What is ECMWF WebAPI

ECMWF WebAPI is a set of **services** developed by **ECMWF** to allow users from the **outside** to **access** some **internal features** and **data** of the centre.

In this page you will find explanations, guides and examples showing how to use the different ECMWF WebAPI services.

This **external access** is limited and managed by the **User Profile access** (Member State, Commercial customers, ECMWF staff member...). Some of these **services** are public and some other are restricted to the Archive Access.

| Type of user | Web | Batch download |
|---|---|---|
| Authorized user | MARS catalogue (Authorization required, browse and download) | Access MARS |
| Commercial user | Archive catalogue (Only browse)<br><br>MARS catalogue (Authorization required, browse and download) | Access MARS |
| Public user | Public Datasets | Access ECMWF Public Datasets |
