# February 2018 Software release

A bit late 😉, we can announce that two weeks ago we released the February versions of the standard ECMWF software packages. Last month's release featured the first full version of Metview 5 and minor updates to the other libraries. Please see the December 2017 Software release blog item below for more information about new features of Metview 5.0 and Magics 3.0.

Metview is built at ECMWF with all the versions of our libraries listed in the table below, and all are included in the February 2018 Metview Bundle. All these packages use the same build system based on CMake - simplifying and harmonising the installation experience. The versions are available on all ECMWF computer systems as "new" versions. If you encounter any issues please feel free to send feedback to Software.Support@ecmwf.int.

ecCodes	2.7.0	ecCodes version 2.7.0 released
GRIB_API	1.26.0	GRIB API version 1.26.0 released
